

Saarthi — 4-Minute Demo Video Script

Snowflake CoCo CLI Hackathon 2026 · Problem Statement 04: Patient 360 & Clinical Copilot

RUNTIME: 4:00 EXACT (240S)

PACING: 140 WPM (~520 WORDS)

FORMAT: APPLE KEYNOTE × OPENAI DESKTOP

HERO: ANJALI DESHPANDE (PAT-DC-12)

EXECUTIVE STRATEGY: THE WINNING 4-MINUTE ARC

This demo script replaces dry QA checklists with an **electrifying, high-stakes product reveal** modeled after Apple's product keynotes and OpenAI's desktop launch demos. It seamlessly proves every hackathon scoring criterion while following one continuous human journey from cross-hospital ingestion to physician safety boundaries.

RUBRIC CRITERION	WHERE THE JUDGE WITNESSES IT	SCORE AREA	SCREEN TIME
Real-World Relevance	Visceral Indian oncology day-care crisis: 85% travel hundreds of km; visits fail at 9:30 AM from missing cross-hospital records.	Relevance (30)	0:00 – 0:25
End-to-End CoCo CLI	Single live CoCo CLI session: Snowflake ingestion, 3 distinct skills, writing tomorrow's readiness brief to disk.	Execution (40)	0:25 – 2:00 (95s)
Skill 1: Risk Stratification	Runs versioned SQL rule SURV-LVEF-002 v1. Detects 14-point cardiac drop (63% → 49%). Zero model hallucination.	Execution (40)	0:45 – 1:10
Skill 2: Reconciliation	Compares insurer table (Pending) vs scanned letter (Approved). Flags rule COV-AUTH-001 conflict for human review.	Execution (40)	1:10 – 1:30
Skill 3: Question Routing	Zero-latency boundary defense: Class B (record state) answered with citations; Class A (treatment judgment) refused by law.	Execution (40)	1:30 – 1:50
Parity on Care Surface	Exact same rule IDs (SURV-LVEF-002, COV-AUTH-001) and findings appear live on the production web app.	Completeness (30)	2:00 – 3:30
The Refusal Peak (Safety)	Music cuts completely. Trastuzumab advice refused under NMC Telemedicine Guidelines; physician evidence packet generated.	Relevance (30)	2:55 – 3:30
One More Thing (Equity)	Compassionate patient checklist in Marathi prevents futile 300 km travel for Anjali's family.	Completeness (30)	3:30 – 3:45

SQL DECIDES · AI READS · THE DOCTOR DECIDES

Directorial Guidelines for Maximum Score

- Discreet On-Screen Badges:** Keep chapter tags top-left (e.g. [01 / INPUT], [02 / PROCESSING · 3 SKILLS], [03 / OUTPUT BRIEF]). Judges tick rubric boxes without pausing.
- Rule ID Continuity:** Highlight SURV-LVEF-002 v1 first in the terminal, then on Anjali's web chart. Proves the CLI engine and web UI share the exact same Snowflake truth.
- The Audio Drop:** Cut background music to absolute dead silence the moment the Trastuzumab question is submitted. Silence commands the room.
- Honest Momentum:** Speed up 3–4s SQL wait times in Clipchamp by 2x with a "2x sped up" label. Shows real execution while respecting the judge's time.

MASTER RUNNING ORDER (12 BEATS · 4:00 TOTAL)

TIME	ACT & BEAT	SCREEN & ACTION	ON-SCREEN GRAPHIC TAG	AUDIO & TEMPO
0:00–0:14	1. The 9:30 AM Tragedy	Title card → Vercel Day Care board slow pan	PS-04 · PATIENT 360	Cinematic ambient pulse
0:14–0:25	2. The Core Axiom	Glide onto Anjali's red Blocked card	SQL DECIDES · AI READS · DOCTOR DECIDES	Steady, serious
0:25–0:45	3. Terminal Ingestion	CoCo CLI reads multi-hospital baseline	COCO CLI · STEP 1: INPUT	Focused, upbeat tempo
0:45–1:10	4. Skill 1: Risk Strat	CoCo runs rules; zoom on SURV-LVEF-002	PROCESSING · SKILL 1 OF 3	Rhythmic terminal pace
1:10–1:30	5. Skill 2: Evidence Recon	CoCo reconciles portal vs letter conflict	PROCESSING · SKILL 2 OF 3	Confident cadence
1:30–1:50	6. Skill 3: Question Routing	Class A refusal vs Class B lookup	PROCESSING · SKILL 3 OF 3	Crisp, definitive
1:50–2:00	7. CLI Brief Synthesis	Writes and displays brief-PAT-DC-12.md	OUTPUT · END-TO-END WORKFLOW	Track swells gently
2:00–2:25	8. Ambient Voice Copilot	Spoken voice → 6 blocked cards light up	SURFACE · VOICE COPILOT	Modern synth groove
2:25–2:55	9. Unbroken Parity	Overview chart → Echo citation PDF modal	TWO-MODEL EXTRACTION PARITY	Focused scrutiny
2:55–3:30	10. The Refusal Peak	Trastuzumab question → Refusal banner	CLASS A · CLINICAL REFUSAL	MUSIC DROPS TO SILENCE
3:30–3:45	11. One More Thing	Family tab toggle → Marathi prep checklist	HEALTH EQUITY · MARATHI CARE	Warm piano chords swell
3:45–4:00	12. The Mic Drop	Split screen (CLI + App) → Final title card	SNOWFLAKE COCO CLI HACKATHON 2026	Resolving crescendo

PREFLIGHT & RECORDING CHECKLIST

- **Verification Gate:** Run `.venv/bin/python -m backend.scripts.prepare_demo` (must print `"status": "PASS"`). Anchors dates to tomorrow.
- **Automated Preflight:** Run `npm run demo:check` against the production build (verified 19/19 passing in 150s).
- **Production Server:** Present from `npm run build && npx next start -p 3000` or hosted `saarthi-360.vercel.app`. Never the dev server (avoids hot-reload drops).
- **Browser Setup:** Clean Chrome window, 1440px wide, 100% zoom, light theme, Copilot switch ON, notifications disabled, mic permission allowed.
- **Terminal Setup:** Dark theme, SF Mono / Menlo 18pt font, clear screen between prompts, run prompts once before recording to warm caches.

THE MASTER SHOOTING SCRIPT: BEAT BY BEAT

ACT I: THE 9:30 AM TRAGEDY (0:00 – 0:25)

Beat 1: The Human Tension

0:00 – 0:14 (14s) · 58 words

SCREEN:

Minimalist title card (2s) → Cut to live Day Care Board at saarthi-360.vercel.app. Cinematic slow pan toward red Needs review column.

BADGES:

Top-left: PS-04 · PATIENT 360 | Bottom-right: SYNTHETIC CLINICAL DATA ONLY

"Every evening across India, cancer day-care centers face the exact same crisis. Families travel hundreds of kilometers overnight on crowded buses for chemotherapy—only to be turned away at 9:30 AM because an echo report is trapped in another hospital, or an insurance approval contradicts the billing system."

Beat 2: The Core Axiom

0:14 – 0:25 (11s) · 38 words

SCREEN:

Camera locks onto patient card **Anjali Deshpande (PAT-DC-12)** with red Blocked tag.

GRAPHIC:

Center screen text: **SQL DECIDES · AI READS · DOCTOR DECIDES**

"We built Saarthi to catch those gaps the evening before. Not by letting an AI play doctor, but on one uncompromising foundation: **SQL decides. AI reads. The doctor decides.** Let's watch it work."

ACT II: THE ENGINE — CoCo CLI ON SNOWFLAKE (0:25 – 2:00)

Beat 3: Cross-Hospital Ingestion

0:25 – 0:45 (20s) · 48 words

SCREEN:

Full-screen macOS Terminal. Dark glass theme, large font. Active Snowflake CoCo CLI session.

TAG:

COCO CLI · STEP 1 OF 3: INPUT INGESTION

coco> Show me patient PAT-DC-12's LVEF results from SAARTHI.CORE.CLINICAL_EVENT and her pre-authorisation status from SAARTHI.CORE.AUTHORIZATION. Keep it short.

"We start inside CoCo CLI, connected directly to our Snowflake warehouse. The input is Anjali's multi-hospital record. Two heart scans: sixty-three percent in June, forty-nine percent today. And one insurance pre-authorisation, marked pending."

Beat 4: Skill 1 — Risk Stratification

0:45 – 1:10 (25s) · 56 words

SCREEN:

CoCo terminal prints evaluation matrix. Zoom punch-in on row SURV-LVEF-002.

TAG:

PROCESSING · SKILL 1 OF 3: RISK-STRATIFICATION

coco> Using the risk-stratification skill, run Saarthi's readiness rules for PAT-DC-12 and show each check with its outcome, rule ID and version.

"Skill one: Risk Stratification. CoCo executes our versioned SQL rules across her clinical timeline. Notice: no language model makes this calculation. Rule **SURV-LVEF-002**, version one. Her ejection fraction fell fourteen points down to forty-nine percent. That crosses the FDA trastuzumab hold threshold. A deterministic fail."

Beat 5: Skill 2 — Evidence Reconciliation

1:10 – 1:30 (20s) · 46 words

SCREEN:

CoCo terminal displays contradictory table status (PENDING) vs letter OCR (APPROVED).

TAG:

PROCESSING · SKILL 2 OF 3: EVIDENCE-RECONCILIATION

coco> Using the evidence-reconciliation skill, compare PAT-DC-12's pre-authorisation in SAARTHI.CORE.AUTHORIZATION with the approval letter. Do they agree?

"Skill two: Evidence Reconciliation. The insurer's portal table says pending. But the insurer's own uploaded letter says approved. Saarthi never hallucinates an answer. It flags rule **COV-AUTH-001** as a conflict, leaves the record uncorrupted, and demands human review."

Beat 6: Skill 3 — Clinical Question Routing

1:30 — 1:50 (20s) · 49 words

SCREEN: CoCo terminal returns instant cascade classification.

TAG: PROCESSING · SKILL 3 OF 3: QUESTION ROUTING

`coco>` Using the clinical-question-routing skill, classify these with SAARTHI.OPERATIONAL.CLASSIFY_QUESTION: "What documents are missing?" and "Should we hold her trastuzumab?"

"Skill three: Question Routing. 'What documents are missing?' asks for record state—Class B. Answered instantly with citations. But 'Should we hold her trastuzumab?' is medical judgment—Class A. By law, it is refused at zero latency and routed to her treating oncologist."

Beat 7: CLI Output — The Readiness Brief

1:50 — 2:00 (10s) · 36 words

SCREEN: Terminal renders rendered Markdown file evidence/demo/brief-PAT-DC-12.md.

TAG: OUTPUT · END-TO-END CLI WORKFLOW COMPLETE

`coco>` Using all three skills, write tomorrow's readiness brief for PAT-DC-12 to evidence/demo/brief-PAT-DC-12.md. Show the file.

"One prompt chains all three skills to write tomorrow's clinical readiness brief directly to disk. Input, processing, and output—complete in CoCo CLI. Now, let's see the care coordinator's desk."

ACT III: THE AMBIENT CARE SURFACE (2:00 – 3:30)

Beat 8: Ambient Voice & Human Confirmation

2:00 — 2:25 (25s) · 52 words

SCREEN: Smooth slide into web app at saarthi-360.vercel.app. Click blue mic icon in Ask Saarthi bar.

ACTION: **Live voice:** "Who is blocked today?" → 6 cards light up. **Live voice:** "Open Anjali's record." → Confirm modal opens.

TAG: CARE WORKSPACE · VOICE COPILOT

"On the care floor, the coordinator doesn't need to write queries. She speaks. Six blocked patients light up on the board. When she asks to open Anjali's chart, Saarthi pauses for human confirmation. It never touches a patient record autonomously."

Beat 9: Unbroken Parity & Multi-Model Audit Trail

2:25 — 2:55 (30s) · 54 words

SCREEN: Anjali's record. Zoom on Needs Attention: SURV-LVEF-002 v1. Click echo citation link → PDF viewer opens on 49%.

TAG: MULTI-MODEL VERIFICATION · AUDITABLE CITATION

"Notice the parity. The exact same rule IDs from CoCo CLI are right here on her chart. And when we click the cardiac citation, it opens the outside hospital's echo scan. Two independent model families—Llama and Claude—had to agree on that forty-nine percent before it was ever admitted to the database."

Beat 10: The Refusal that Wins the Room

2:55 — 3:30 (35s) · 68 words

SCREEN: Ask the record: "Should we hold her trastuzumab?" → Prominent Refusal Banner appears → Click [Prepare evidence packet for Dr. Oncologist].

AUDIO:  **BACKGROUND MUSIC CUTS OUT IMMEDIATELY. COMPLETE, DEAD SILENCE.**

TAG: CLINICAL SAFETY · CLASS A REFUSAL

"Now watch what happens when someone asks: 'Should we hold her trastuzumab?' (Deliberate 2-second silence). Most AI demos fabricate medical advice. Saarthi refuses. Under India's Telemedicine Practice Guidelines, clinical decisions remain solely with the doctor. Saarthi compiles the cited evidence packet instead—keeping the oncologist entirely in control."

ACT IV: THE HUMAN HEART & CLOSE (3:30 – 4:00)

Beat 11: One More Thing — Marathi Family Care

3:30 – 3:45 (15s) · 34 words

SCREEN:

Click **Family** tab → Select **Marathi (मराठी)**. Patient prep card renders in Marathi script.

AUDIO:

Warm, emotive acoustic piano chords swell softly back in.

TAG:

HEALTH EQUITY · MULTILINGUAL PATIENT PREPARATION

"And one more thing. Anjali's family speaks Marathi. The night before, they receive this checklist in their own language—explaining what is ready, what is pending, and preventing an agonizing 300-kilometer journey for an infusion that cannot happen."

Beat 12: The Close

3:45 – 4:00 (15s) · 32 words

SCREEN:

Split-screen: CoCo CLI terminal on left; Saarthi Care App on right. Smooth fade to final title card.

TITLE CARD:

Saarthi · SQL Decides · AI Reads · Doctor Decides | github.com/.../patient-360 | saarthi-360.vercel.app

AUDIO:

Resolving musical swell. Fade to black at 3:59.

"Three skills. One engine in CoCo CLI. Deterministic SQL rules. Zero hallucinations. The doctor stays in charge. This is Saarthi."

MASTER PRONUNCIATION & TELEPROMPTER CHEATSHEET

WRITTEN TERM	VOICE TEXT / SCRIPT SPELLING	PHONETIC PRONUNCIATION (TTS / VOICE)
Saarthi	Saarthi	Saar-thee
CoCo CLI	CoCo CLI	Co-Co C-L-I
LVEF	LVEF	L-V-E-F (say the letters)
SURV-LVEF-002	SURV-LVEF-002	surv L-V-E-F zero zero two
COV-AUTH-001	COV-AUTH-001	cov auth zero zero one
Trastuzumab	trastuzumab	tras-T00-zoo-mab
Paclitaxel	paclitaxel	pack-li-TAX-el
NMC	NMC	N-M-C
SQL / AI	SQL, AI	S-Q-L, A-I

VIDEO EDITING & AUDIO CHOREOGRAPHY NOTES

1. **Word Count & Tempo:** 519 words across 240 seconds is exactly 130–140 words per minute. Never rush. Allow 1–2 seconds of pause after major statements.

2. **The Audio Cut at 2:55:** This is the secret weapon of the demo. When the cursor submits *"Should we hold her trastuzumab?"*, cut the background music instantly to 0%. Let the refusal card land in pin-drop quiet.

3. **Terminal Momentum:** If CoCo CLI takes 3–5 seconds to execute SQL, speed up that segment by 2x–3x in Clipchamp and add a tiny "2x sped up" label in the corner. Judges appreciate honest speed.

4. **Voice Mixing:** Keep background music at 15–20% under voice lines. Duck music to 5% when live voice commands are spoken at 2:00.

5. **Final Export:** 1080p, 60fps or 30fps, exactly 3:58 to 4:00 duration. Test the YouTube unlisted link in incognito mode before submitting.
